## Concept:

Cartesian products of sets - equality of ordered pairs- triple product-relations- functions- domain- range- different types of functions- algebra of functions.
Notes:

- If $(\mathrm{a}, \mathrm{b})=(\mathrm{c}, \mathrm{d})$ then $\mathrm{a}=\mathrm{c}$ and $\mathrm{b}=\mathrm{d}$.
- $A x B=\{(x, y) / x \in A, y \in B\}$
- $\operatorname{AxAxA}=\{(\mathrm{x}, \mathrm{y}, \mathrm{z}) / \mathrm{x}, \mathrm{y}, \mathrm{z} \in \mathrm{A}\}$
- A relation R is a subset of the Cartesian product.
- A function is a relation with every element of first set has one only one image in second set.
- The set of all first elements of the ordered pairs in a function is called domain.
- The set of all second elements of the ordered pairs in a function is called the range.
- Second set itself is known as co-domain.
