

**ASSIGNMENT**

**SUBJECT - PSYCHOLOGY**

**CLASS - XI**

**LESSON - HUMAN MEMORY**

**CHAPTER - 7**

1. Define the term 'memory' and 'forgetting'.
2. Discuss the stage model of memory.
3. What is the 'level of processing' view of memory?
4. Describe the types and sub-types of long-term memory.
5. Explain the hierarchical network model of memory.
6. What is dual coding hypothesis?
7. Explain how memory is a constructive process.
8. What is schema?
9. Explain disuse theory.
10. Explain how forgetting is due to interference?
11. Explain how forgetting is due to retrieval failure?
12. Define the term mnemonics.
13. Explain the mnemonic techniques using methods of imagery.
14. Explain the mnemonic techniques using methods of organization.
15. What is PQRS method?
16. Name the following psychologists:

- (i) Memory as a reproductive process
- (ii) Memory as a constructive process
- (iii) Declarative memory classification
- (iv) Levels of processing
- (v) Dual coding hypothesis
- (vi) Stage model of memory

17. Explain the nature of memory in terms of encoding, storage and retrieval.
