7. i want to go to king fahad park

8. donald plays for the united club

9. have you ever been to the taj mahal

10. the Nile flows through Cairo

Reading Comprehension

Read the following comprehension and answer the questions that follow

Disadvantages of Fast Food

Fast food nutrition should make up a minimal part of a healthy diet. Fast food and junk foods are high in fat, sodium and sugar, which can lead to obesity and a range of attendant health problems, including diabetes, heart disease and arthritis. Here are the facts about how excessive junk food consumption affects your body. Junk food doesn't contain the nutrients your body needs to stay healthy. As a result, you may feel chronically fatigued and lack the energy you need to complete daily tasks. The high levels of sugar in junk food puts your metabolism under stress; when you eat refined sugar, your pancreas secretes high amounts of insulin to prevent a dangerous spike in blood sugar levels.

Q1. What can junk food lead to ?

Q2. What happens when you eat refined sugar?

Q3. Give a word from the passage which means tired.

Q4. What does fast food contain in high level?

Rainbows

Read the following comprehension and answer the questions that follow

Rainbows are often seen when the sun comes out after or during a rainstorm. Rainbows are caused when sunlight shines through drops of water in the sky at specific angles. When white sunlight enters a raindrop, it exits the raindrop a different color. When light exits lots of different raindrops at different angles, it produces the red, orange, yellow, green, blue, indigo, and violet that you see in a rainbow. Together, these colors are known as the spectrum. These colors can sometimes be seen in waterfalls and fountains as well.

Did you know that there are double rainbows? In a double rainbow, light reflects twice inside water droplets and forms two arcs. In most double rainbows, the colors of the top arc are opposite from those in the bottom arc. In other words, the order of colors starts with purple on top and ends with the red on bottom. In addition, rainbows sometimes appear as white arcs at night. These rainbows are called moonbows and are so rare that very few people will ever see one. Moonbows are caused by moonlight (rather than sunlight) shining through drops of water.

1. When are rainbows seen?

2. How do rainbows appear sometimes at night?

3. Which of the following IS NOT true?

- i. Moonbows are caused by moonlight.
- ii. Rainbows are usually seen after or during a storm.
- iii. Double rainbows are two rainbows that are exactly the same.
- iv. Spectrum colors sometimes appear in fountains and waterfalls

4. What question is answered in the last paragraph?

- i. What colors appear in a rainbow?
- ii. How do double rainbows form?
- iii. How long do rainbows last?
- iv. Why do waterfalls produce rainbow-like spectrums?

5. What color is a moonbow?

- i. the passage doesn't say
- ii. white
- iii. green
- iv. yellow

6. Give two water forms given in the passage.
