ASSICNMENT: 9-OCTOBEF
AREAS OF PARALLELOGRAMS

1. Caiculate the area of quadrilateral $A B C D$. C

2. In the given figure $A B C D$ is a trapezium in which $A B / / D C$ and its diagonal $A C$ and $B D$ intersect at $O$.

Prove that at $(\triangle A O D)=$ ar $(B O C) \quad D$

B
3. To the given figure $A B C D$ is a parallelogram. ITar $(\triangle B A P)=10 \mathrm{~cm}^{2}$ and $\operatorname{ar}(\triangle C P D)=30 \mathrm{~cm}^{2}$ then find ar (parallelogram $A B C D$ ).

4. ABCD is a parallelogram. If PC: $\mathrm{PA}=1: 3$ and ar $(\mathrm{ABPC})=16 \mathrm{~cm} 2$ then find ar( $A \mathrm{ADP})$.

5. In the given figure, $O$ is any point on the diagonal $B D$ of parallelogram $A B C D$. Prove that $A r(\triangle A O D)=\operatorname{ar}(\triangle C O D)$

6. $A D$ is the median of $\triangle A B C$. If ar $(\triangle A B D)=x \mathrm{~cm}^{2}$ and ar $(\triangle A B C)$ is $y \mathrm{~cm}^{2}$, find the relation between $x$ and $y$.
7. In $\triangle A B C, D$ and $E$ are two points that trisect base $B C$. Show that $\operatorname{ar}(\triangle A D E)=1 / 3$ ar $(\triangle A B C)$
8. ABCD is a rhombus whose one angle is $60^{\circ}$. Prove that the ration of the lengths of its diagonal is $\sqrt{3}: 1$.
9. Prove that of all the parallelograms of which the sides are given rectangle has the greatest area.
10. Show that diagonal of a parallelogram divide it into 4 triangles of equal area.
